SUBJECT: Feasibility Study of Collins Radio

TO: Contracting Officer

Dear Dan:

Our using organization has asked us to install a Collins high-frequency receiver-transmitter in their aircraft. Russ and I discussed this installation with [redacted] and arranged for the delivery of one Collins radio set to him, which was furnished by our users. At present, Ed is conducting a feasibility study with this radio to determine if it can be installed and operated in the FOG aircraft.

It is requested that appropriate coverage be issued to the contractor for this study. If the installation is determined to be feasible, the contractor will be requested at a future date to procure the radio sets and to fabricate a kit of parts for their installation.

Sincerely,

132

SP1917 Call type
SP1918 T+M

See SAPC 24152
in answer re
this.

As I see this type of work, it falls under the T+M - later, any procurement of parts and installation kits would be authorized, under the call type. I would appreciate your comments.
